

To whom it may concern

STATEMENT REGARDING UN 3166, UN 3171, UN 3363, UN 3528 AND SAFETY DATA SHEETS

UN 3166 only applies to **vehicle, flammable gas/liquid powered** or **vehicle, fuel cell, flammable gas/liquid powered** containing dangerous substances as a residue or an integral element of the vehicle.

UN 3171 only applies to **battery powered vehicle** or **battery powered equipment** containing dangerous substances as a residue or an integral element of the machinery or apparatus.

UN 3363 only applies to **machinery** or **apparatus** containing dangerous substances as a residue or an integral element of the machinery or apparatus.

UN 3528 only applies to **engine/machinery, internal combustion, flammable liquid powered** or **engine/machinery, fuel cell, internal combustion, flammable liquid powered** containing dangerous substances as a residue or an integral element of the machinery or apparatus.

These classifications are used regardless of the kind of dangerous goods contained since it is the UN number for the article and not for the substance contained.

For this reason, **it is not possible** to require a safety data sheet (SDS) for the product. SDS is a requirement for chemical products (not articles) defined in the REACH regulation 1907/2006 - not including transportation of dangerous goods.

Additional information for all Nilfisk products shipped under:

UN 3166 and UN 3528 classification; the remaining residual amount of hazardous goods in the machine is mostly either UN 1202 Diesel Fuel or UN 1203 Gasoline. The maximum residual volume does not exceed 0.5 liters.

UN 3171 classification; the remaining residual amount of hazardous goods in the machine is either batteries classified as UN 2794 or UN 2800.

UN 3363 classification; the remaining residual amount of hazardous goods in the machine is mostly either UN 1202 Diesel Fuel or UN 1203 Gasoline. The maximum residual volume does not exceed 0.5 liters.

Compliance with Special Provision 301.
